GERMAN DATA SCIENCE DAYS

'Big Data Economics' for Evidence-Based Policy Advice

Prof. Dr. Oliver Falck

What is Big Data Economics @ ifo?

What?

The application of

- **large, unconventional data** sources and/or
- new computational-intensive **statistical methods**
- to tackle important **economic questions**
- for excellent **research** papers and impactful **policy advice**

Why?

- Many **(time-critical) questions cannot be answered with official statistics** or standard surveys because data are not collected at all, too late, or too roughly
- **Digitization creates "Big Data"** in business processes at companies, platforms, ministries,....
- Combination of modern training in econometrics, data science and economics gives us the **skills to analyze the data!**

➤ "Big Data" has the great potential to advance empirical applied economics research and policy consulting
